

BDi Machinery's PH60 is a versatile and effective sprayer unit. The dual adjustable spray booms come with tilt control for accurate distribution of chemical. The 20" rubber cones can be set up with a 12" or 24" spray pattern. Also comes equipped with a separate hose with a wand nozzle for spot spraying, and an anti-drip nozzle to keep from unwanted application. The arms have safety kickback spring joints to avoid unwanted contact with plants, and the rubber cones are malleable to allow close application of chemical to the crop. This unit is very adaptable and can operate in a wide variety of areas. Its easy access controls make it comfortable and convenient for the driver to operate the machine.
