

The SRV has a head-on mounted frame with hydraulic side shift and shockproof joint. The aluminum shaft and steel screws serve to avoid vibrations. Thanks to a rapid coupling system, the sucker remover whips can be changed in a matter of seconds. Axial rotation of the shaft allows the header to also be used to reduce weeds. This tool can be applied to any Tower or Vision frame, or as an add on to the Bio-dynamic or Turbo Group.

The whips come in three varieties: round soft (ideal for young vineyards); square hard (aggressive for grass); large strips (very aggressive for weeds)

Can also be added to TRU, TRL, TRL-B, TRP

Round Soft

Square Hard

Large Strips

MODEL	Row Min	Row Max	Offset (min/max)	Weight	Hyd. Flow	Shaft Length
SRV 150	86.5"	138"	27.5"/47"	298 lbs	8 GPM	23.5"
