

The OLMI mechanical weeder delivers high-quality results without posing any risk to the plants. It performs two tasks simultaneously: removing shoots from the base of the vine and eliminating grass around the plants. Its special roller, equipped with nylon threads, is angled at 15° relative to the row direction. This inclination allows it to tip and remove shoots from the vine stump without damaging the plant. It is particularly well-suited for hillside vineyards with steep slopes, as well as vineyards with irregularly shaped stumps, offering agile, safe, and environmentally respectful operation.

New protection cover with HAPPY PLANT system in order to work without risk of damaging the stumps and the young plants.

AVAILABLE IN SINGLE OR DUAL FORMAT

SINGLE

Model	Max Size	Tractor Width
DCM01	47"	49"-55"
DCL01	55"	55"-67"
