

Olmi deleafers use pressure produced by a compressor that passes through the rotors to hit the leaves in the targeted area. The process allows for the cluster removal of leaves to provide ventilation and sunlight without harming the fruit.

460F

Front mount air impulse leaf remover machine with two bilateral heads, 6 hydraulic movements, and electro-hydraulic joystick to control movements.

470F

Front mount air impulse leaf remover machine with dual bilateral heads, 3 hydraulic movements, cardan joint, and electro-hydraulic joystick to control movements.

470R

Rear mount air impulse leaf remover with two heads on straddle frame, 4 hydraulic movements, cardan joint, and electro-hydraulic joystick to control movements.

510R

Rear mount air impulse leaf remover with 4 heads on a straddle frame, 6 hydraulic movements, cardan joint, and electro-hydraulic joystick to control movements.

MODEL	Rotation PTO	Weight	Engine HP
460F	750 or 1000 RPM	1050 lbs	80
470F	750 or 1000 RPM	1367 lbs	80
470R	750 or 1000 RPM	1146 lbs	80
510R	750 RPM	2646 lbs	110
