

CIMA's swivel trailers are stable and nimble, providing an excellent answer for hilly terrains and tight areas. The fan and spray head mount on your tractor's 3 point hitch with only the tank weight riding on its trailer. The sprayer's wheels track your tractor's path, making it possible to travel out of one row and into the next without backing up.

Custom distribution heads available for every application, see all options at [BDiMachinery.com](http://BDiMachinery.com)

## The CIMA Advantage

High Volume Sprayer

Low Volume CIMA Sprayer

CIMA's Low Volume sprayers create droplets of 100-150 $\mu$ , while standard high pressure sprayers commonly make droplets of 250-400 $\mu$ . Breaking down the liquid into smaller droplets allows for better coverage, more even distribution, and allows appropriate application without soaking your crop. The low volume system coats all surfaces of the system with air speeds around 170-200 MPH, achieving maximum coverage and a cleaner crop.
